CyanosHeatPlot.m\$variable

Figure 2. Heatmap of the relative abundance of metabolites in the plasma of the control group (n = 10) and the experimental group (n = 10). The color scale represents the relative abundance of metabolites, ranging from 0 (blue) to 1 (red). The metabolites are listed on the y-axis, and the groups are listed on the x-axis. The heatmap shows that the relative abundance of many metabolites is significantly higher in the experimental group compared to the control group.
